

NETCOM case study

Greneway School

The Requirement:

To completely re-develop an existing ICT suite to create a better teaching environment whilst securing the school's new computer equipment.

Greneway School contacted Netcom after meeting us at the BETT show in January 2010. This project was located in Royston, Hertfordshire.

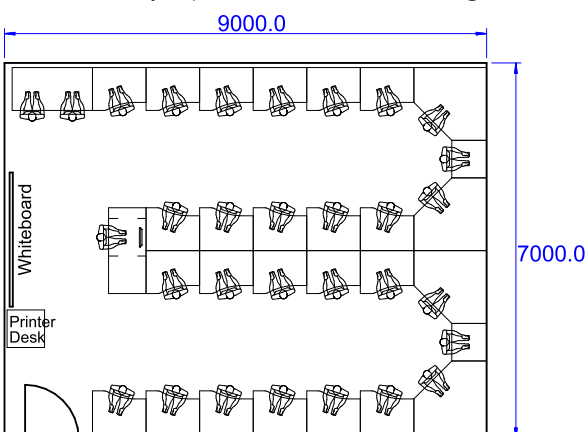

The Solution:

Netcom completely re-designed the rooms floor plan including all data and power cabling routes. The new room plan was created using our standard secure desking range which offered the security solution required along with improved student desk space.

The newly designed floor plan meant nearly the entire class would be facing the teacher and interactive whiteboard. Netcom completely re-designed the power and cat5e data routes to provide a data and electrical point at every workstation.

The solution included the following:

- 22x Single wave fronted secure Students Desks
- 4x Corner Student Desks
- 2x Single Student Desk
- 1x Double Student Desk
- 1x Teachers Desk
- 31x Secure PC enclosures
- 31x Secure Monitor arms
- 35x Cat5e data outlets
- 32x Twin electrical sockets
- 3 compartment trunking system to house new cabling
- Full projector solution including connection to local computer

For more information on how NETCOM92 can help and develop a unique ICT solution for your school or college, call our ICT customer service team on 01279 441505.
